What is LHC-forms and what can it do?
LHC-Forms is Powerful

https://lhncbc.nlm.nih.gov/project/lforms

- A fast, web based open source JavaScript program (300kB) generates live forms on-the-fly using JSON form descriptions.

- Accommodates nested groups and repeating groups of questions (e.g. Surgeon General’s Family Health History).

- Has all of the usual form functions -- Skip logic, rich validation checks, autocomplete menus, score calculation, other calculations

- Answer lists displayed as columnated grid with autocomplete functions.

- Many different layout styles and responsive design that fits any screen size.

- Some examples follow
All LOINC 2000+ LOINC panels are LHC forms.

- Same for most of NLM’s Common Data Elements (CDEs) – not all LOINC.
  - NIH Common Data Elements (CDE) Repository: https://cde.nlm.nih.gov/home

Form questions modeled after to HL7 observations with data types, cardinality, units of measure for quantities and answer lists for ordinal variables.

Has external (standard) vocabulary tables (e.g. RxNorm, LOINC, ICD, many genomic standards) with auto-complete service.

LHC-Forms service (https://lhncbc.nlm.nih.gov/project/lforms) generates HL7 v2 messages from entered data.

Via SMART, can link to patient resource (now), and deliver captured data to FHIR resource(s). (Stay tuned for today’s demo.)
Lots of rich form (questionnaire content) in LOINC

- Most CMS forms (OASIS, MDS, Dialysis) and CMS is organizing all of their assessment instruments around LOINC (e.g. CDC birth and death certificates).
- Lots of psychosocial surveys (e.g. PROMIS, Neuro-QOL), Clinical structures, ventilator variables, 12-lead EKG, Pulmonary function tests (Mayo), cardiac echos (DICOM), Nursing instruments (ANA), Lab panels, Ophthalmology measures (NEI), etc.
Associated Tools Services

- Form builder for creating new forms and editing old ones
- Docker for delivering packages.
- JSON Schema for LHC-Forms.
  - Form: https://github.com/lhncbc/lforms-validator/blob/master/lforms-form-schema.json
  - Item: https://github.com/lhncbc/lforms-validator/blob/master/lforms-item-schema.json
- Clinical table linker- provides machinery for questions whose answers come from external tables
  - “Secret sauce”: via URL, implementer can specify what fields are searched, which are returned as part of columnated grid, and which are stored in the value field as hidden variables
  - Other fields in the form can use these hidden variables as answer lists, default values or help messages -- will demonstrate.

LHC Form Builder

Editing LOINC: 72513-5 Vital signs with smoking status and pain scale [VSP]
After selecting a starter form

- List of all forms, questions at the start of their hierarchy.
- User can add or remove levels, and reorder questions within a level.

Detailed attributes about the current question. In this case, the first one in the hierarchy. Can edit cardinality, skip logic, validation checks, etc.

Full live form for what has been created so far. Will look just like it would look in real use. This space can also show the JSON output that underlies the form.
- Clicked on one variable, BP diastolic
- Shows Controls for managing cardinality
- Input required
- Data type
- Default value
- Formula
- Show/Hide rules (Skip logic)

### ADD NEW OR IMPORT FROM LOINC

1. **Vital signs, weight**
   - 1.1 SaO2 % BldC Oximetry
   - 1.2 Weight Measured
   - 1.3 Head Circumf OFC ...
   - 1.4 Bdy height
   - 1.5 Bdy height lying
   - 1.6 Body temperature

1.7 **BP dias**
   - 1.8 BP sys
   - 1.9 Heart rate
   - 1.10 Resp rate
   - 1.11 BSA Derived
   - 1.12 BMI

### Data Type
- **Editable**
- **Answer required?**
- **Type**
- **Default answer**
- **Units**
- **Formula**
- **Add Restrictions**

### Show/Hide rules (Skip logic)

</table>
The FHIR connection
What is working

Using SMART on FHIR

- Can pull up form service from [https://gallery.smarthealthit.org/](https://gallery.smarthealthit.org/)
  - Very fast -- all with native FHIR resources.
  - Provides an ecosystem for LOINC.

Steps

- Pick a patient from the sample patient registry file.
- Pick a form.
- Enter data.
- Store it in the Diagnostic report resource -- using related observations as needed to implement that hierarchical – and repeating – group structure.
- Retrieve it and view it back in the form.
- Inspect V2 message.
- Inspect FHIR message.
LHC-Forms on FHIR

LHC-Forms on FHIR

LHC-Forms (a.k.a. LForms) is a lightweight, feature-rich, open-source widget that creates input forms for Web-based medical applications or to integrate into electronic health records (EHRs), personal health records (PHRs), and mobile health apps.

</table>

#### Diseases history panel

<table>
<thead>
<tr>
<th>History of diseases</th>
<th>Search for value</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Age range at onset of disease</td>
<td>Select one</td>
<td></td>
</tr>
</tbody>
</table>

- Add another "Diseases history panel"

- Family member health history
Issues and Plans
Issues

- Observations are all packaged in the Diagnostic report resource.
- Too slow to move into observation.
- But currently no option to search by observation ID in that resource.
- To put them in the observation resource requires requesting a new observation instance ID from that resource, then tying it into the diagnostic report and then storing the observation into the observation resource. With current hardware, it can take 2 seconds per observation. Would not be tolerable to user.
Issues (2)

- Lots of challenges with complicated objects whose attributes are treated as individual fields on most real world forms.
  - Date and time usually entered separately not as one big time stamp
  - Provider ID entered separately not (usually) as a package with many separate fields.
  - Telephones etc. rarely entered with all of the paraphernalia.
  - Even quantities present problems -- easier to use string and regular expressions for many cases (Will make a value- and units object soon)
To do

- Link to provider, orders, encounter and depending on which one is chosen pull the other info from that resource.
- Solve the slow observation store problem.
- Provide report date and deal better with effective date.
