## MetaMap's Fielded MMI Output

When called with the `-N (fielded_mmi_output)`, MetaMap generates pipe-separated Fielded MMI (MetaMap Indexing) output.

For example, the pretty printed MMI output generated from `heart attack` is:

```
00000000 | MMI | 14.64 | Myocardial Infarction | C0027051 | [dsyn] |  
  ["-- Heart Attack"-tx-1-  
  "heart attack"-noun-0] |  
TX | 0:12 | C14.280.647.500;C14.907.585.500
```

A detailed description of MetaMap's Fielded MMI output is available [here](#).

A detailed explanation of MetaMap's MMI scoring is available [here](#).
