MetaMap: Example of MEDLINE Citation format

MetaMap understands MEDLINE format (shown below), and recognizes three fields:

1. PMID
2. Title
3. Abstract

MetaMap will in this case process the title and abstract, and associate the results found with the PMID.

 TI   - Do sociocultural factors predict suicidality among persons of African descent
       living in the U.S.?
PG  - 203-17
 AB   - Given that researchers have found increased risk for suicidality and other
       psychiatric problems among acculturated individuals, we predicted similar results
       for African-descended people living in the U.S. We surveyed a community sample of
       423 adult men and women of African descent to determine acculturation's
       relationship to Black suicide. Participants completed the African American
       Acculturation Scale, the Multi-Dimensional Support Scale, and a subscale of the
       Spiritual Well-Being Scale. Suicidal ideation and history of suicide attempt were
       defined as a "yes" response to the questions, "have you ever considered taking
       your own life?" and "have you ever attempted to take your own life?" We found
       that religious well-being (not acculturation) was predictive of both suicidal
       ideation and history of suicide attempt.
