MetaMap's XML Output

When called with one of the options `--XMLf`, `--XMLn`, `--XMLf1`, or `--XMLn1`, MetaMap generates XML output:

- `--XMLf` generates formatted XML containing one XML document for each input *record*.
  Input records are by default separated by a blank line.
  The formatted XML output generated from the input `heart attack` can be viewed here.

- `--XMLn` generates unformatted XML containing one XML document for each input *record*.
  Input records are by default separated by a blank line.
  The unformatted XML output generated from the input `heart attack` can be viewed here.

- `--XMLf1` generates formatted XML containing one XML document for each input *file*.

- `--XMLn1` generates unformatted XML containing one XML document for each input *file*.

Details about MetaMap's XML output are available here (HTML) and here (PDF).
